scale – Carry-on baggage check

More sales with process-optimized check-in

Optimise your service and sales and give your passengers relevant carry-on baggage information. scale is a harmonious complete package that centres on functionality with its minimalistic clarity – without any mains connection from the building required.

Is it carry-on baggage or do you have to check it in?

With scale, passengers will receive clear information about their luggage - and will therefore have the opportunity - in good time - to hand in excessively heavy and large items of luggage at the check-in. No irritating re-weighing at the boarding desk, no waiting passengers.

The advantages of scale at a glance

- _ new sources of revenue can be generated
- _ no more time-consuming luggage checks in the check-in area
- _ carry-on baggage that is the right size facilitates quick boarding
- _ loading weight is adhered to
- _ flexible use thanks to its wheels
- _ ergonomic transport handle makes handling easier
- _ customisable info panel containing regulations for carry-on baggage
- _ battery-operated with a long life
- _ safe and convenient maintenance via lockable inspection opening
- _ appealing product design enhances brand identity
- _ long life guaranteed by high processing quality, made in Germany
- _ Building Material Class B1; Class A if required
- _ designed for two different luggage formats (e.g. carry-on baggage, laptop case)

Real added value - for customers and staff

No more losing valuable time when boarding caused by carry-on baggage that cannot be stored, stuffed overhead storage compartments, irritated passengers and stressed flight staff. You will benefit from less stress on personnel, reduced time and costs and increased turnover. scale provides real added value not only for the passengers, but for your staff too.

Easy to transport

At just 35.5 kg, scale is easy for anyone to transport and can therefore be used flexibly at any location.

scale

sophisticated technology, clever details

Integrated digital scales

- _ units of weight can be set at kilograms (kg) or pounds (lb)
- _ in order to avoid misuse, the preset weighing area is limited to 20 kg
- _ weighing range can be set individually – higher measurement ranges are also possible
- _ weighing precision +/- 100 grams
- _ saves batteries by means of automatic switch-off
- _ no external electricity supply required
- _ batteries only need to be changed after approx. 1 year assuming 200 weighings per day
- _ generous LCD display at an ideal reading height
- _ automatic reset to zero for next weighing after carry-on baggage is removed

Robust carry-on baggage basket

The integrated basket can take up to 120 kilos. The standard dimensions of the basket are 55 x 40 x 23 cm and can be selected freely depending on your carry-on baggage stipulations. The floor of the basket is open, which prevents undesirable waste disposal.

A closed and smooth surface with room to reach in at the side also enables difficult pieces of luggage such as rucksacks or bags with buckles. Openings on the front and side of the basket frame and additional line margins define a second piece of luggage measuring 40 x 30 x 10 cm.

Ergonomic transport handle

The ergonomic transport handle on the rear of the scale guarantees a fast change of location. The optimum height of the handle enables the scales to be transported comfortably.

Info panel containing regulations for carry-on baggage

The display module is screen-printed and therefore defies any attempt to damage it. A digitally printed magnetic foil is used as an info panel and enables the luggage regulations to be presented in accordance with corporate design. An additional protective laminate guarantees long life. Information sheets can be changed quickly and economically at any time.

Quickly and easily accessible

The lockable battery compartment makes it easy for batteries to be changed and simultaneously protects batteries from unauthorised removal. Eight standard AA mignon batteries are used.

Customisability

scale has overall dimensions of 55.4 x 144.1 x 43.4 cm and is powder-coated as standard in RAL 9006 white aluminium – but it can be customised in any RAL colour on request.

The rear side of the steel can have individual information displayed on it using digital print on foil or foil cut. The bottom plate, fitted with rubber feet, guarantees both high stability and high resistance to unwanted slipping. The manufacturer's URL is located on the upper side of the steel.

airport signage – complete airport guidance and orientation systems

Since its foundation in 1990, Vangenhassend GmbH has been implementing comprehensive communication solutions for airlines and airports.

There are special requirements for the design of a working guidance system in a public area such as an airport. You can benefit from our many years of experience. We will give you comprehensive advice on timeless product design, optimum legibility, characteristic colour and a selection of fireproof material. Here, the kind of information determines

the choice of communication system. With our static or digital airport systems, the focus is on both an informing and orientating function and the preservation of the company's own corporate design. A clear corporate image strengthens the brand-specific appearance and achieves fast recognition. Communication systems from Vangenhassend fulfil functional, technical and aesthetic criteria. You will also receive a cross-system, uniform appearance when using the most varied static and digital guidance and orientation systems.
